

Product Brief

Product Brief

Goal

Build a minimal AI-assisted TODO manager that accepts text or voice commands and manages user tasks through a LangGraph backend.

Stack

Layer	Technology
Agent orchestration	LangGraph
API	FastAPI
Runtime	Python
Database	PostgreSQL
Input	Text and browser microphone
Speech-to-text	Provider-backed transcription service

MVP Scope

- Register a user with `username` and `api\_key`.
- Generate a unique `tenant\_id` from a username hash plus a random suffix.
- Capture text commands directly.
- Capture voice, convert speech to text, and process the transcript.
- Create, update, complete, delete, prioritize, and query TODO tasks.
- Store all task data with tenant isolation.
- Return short conversational responses to the UI.

Out of Scope for MVP

- Wake-word activation.
- Continuous listening.
- Real-time voice conversation.
- Reminder notifications.
- Analytics dashboards.
- Text-to-speech responses.

Example Commands

- Add gym at 7 PM.
- Mark backend task as completed.
- Remove yesterday's pending task.
- Update meeting time to 4 PM.
- What did I complete today?
